

GNG Safety

At GNG safety we offer you total peace of mind, manufacturing and supplying a range of foam filled safety products, which will ensure that you are complying with all the required safety regulations, so that you can avoid costly compensation battles and reduce your insurance premiums.

Our safety products are made from high impact absorbent foam, and are incredibly hardwearing, featuring reinforced PVC rip-stop covers. We are able to manufacture to any shape or size and offer creative design solutions to ensure that they are easily attachable and removable.

Not only do we make robust safety padding, which will greatly reduce the impact of collision with most obstacles, but we also understand the business value and potential advertising revenue which personalised branding can bring to such products, considering the high exposure that they can receive, which is why we offer a full in-house design and printing service to ensure high quality bespoke branding requirements with an efficient turnaround.

We supply the following products for any industry and also offer bespoke design solutions for those with unique specifications:

- Post protectors
- Pole protectors
- Column padding
- Goal post pads
- Scaffolding protection
- Wall or corner pads
- Custom foam padding
- Car park padding

As well as providing white label to key accounts, we also supply through our own brand, Safety-Pads. Putting safety first, our Safety-Pads brand supplies innovative, high quality safety padding to schools and nurseries, the construction industry, factories and the workplace, and to key national resellers.

In an increasingly health and safety conscious society, there is no better time than the present to find out what GNG safety can do for you.
